

How To Receive Maximum Results From This Course

1. PRACTICE

Practice, practice and practice again every Python concept you are going to encounter. Open the Python interpreter or create simple scripts to deeply understand and practice every Python data type, function, module etc. Test everything you think of!

2. BE ORGANIZED

Try to follow the course line and watch the videos in the order they were provided by me. This way, you will easily understand the logic of each section and have a clear path to the advanced section of the course. Also, after each section, practice!

3. BE SYNCHRONIZED

Try to use the same software versions and code samples I use in the course, before starting to experiment with different versions, use new tools or build your own setups. Remember to practice!

4. CHECK THE ADDITIONAL RESOURCES SECTIONS

Always check out the additional section of the lectures in which I encourage you to do so, to discover new tools or expanded information on a particular topic or to download instructions or configuration samples to help you deal with the complex topics.

5. CHECK ALL THE DOCUMENTS I POSTED IN THE COURSE

Check out the installation guides, sheets & exercises I've added.

6. CHECK THE DISCUSSIONS AREA AND FEEL FREE TO ASK OR SUGGEST ANYTHING RELATED TO THE COURSE
